

# Staging

- Currently the staging area and facilities available include over 15,000 square feet of open dividable space including secure office/meeting area. The cabinet layout will determine the space required for staging. The costing and charges will be adjusted accordingly to actual requirements.
- The staging area can provide sufficient electrical power for all equipment under test to be energized. Both 24VDC and 120 VAC, 60 Hz power as a standard. Adequate building grounding will also be in place.
- Additional power requirements can be made available. Excessive power requirements for panel testing are to be discussed with the project manager at time of order.
- Customer supplied cabinets and equipment will require a power requirement schedule.
- Custom-sized areas can also be made available for the client, which would be determined prior to proposal. Any deviations shall be identified and flagged with all options and/or opportunities identified in a separate section titled "Options and Deviations". Prices will be detailed in a clear and concise manner so equipment additions or deletions can be made without a total requote.
