

SPARTAN CONTROLS

ROC809/827 Solution

Modern SCADA and control applications often require the ability to perform PLC type control while maintaining the auditability and standardization of a flow computer. The ROC 800 platform provides such a solution.

Solution

- ROC 809/827 - Highly expandable small scale PLC type controller with the ability to perform 12 meter runs
- Write ladder-logic/flow-chart control using one of five standard languages (IEC 6113-3)
- Liquid calculation support
- Wireless transmitter interface
- Smart Remote Automation, Fieldbus and HART interfaces

Potential Applications

- Reading of tank levels/switch indicators
- Reading of any non-critical measurement points and interfacing to other systems (PLCs, callouts, displays, etc.)

Measurable Cost Savings

- Installation costs of traditional measurement include design, drawing modifications, cable-tray or hydrovac. A wireless solution reduces or eliminates these costs.
