

POWER AND UTILITIES

Power and Utilities

Using our in-depth knowledge of the power industry, the Data Management Consulting Practice has designed and deployed scalable solutions in the following areas:

- Energy Management Systems (EMS) Integration
- Energy and Production Data Management
- Meter Data Management
- Production Data Modeling
- Power Generation Asset Management
- Production Data Systems downstream application Integration
- Business Change Management
- Enterprise Integration Management of Production Data
- Custom Plant KPI reports

Emerson works closely with utility companies to design and implement solutions that will reduce production costs, improve reliability and Plant operations. Our Consultants will collaborate with your key business stakeholders to develop solutions that will derive more value from your generation assets. Our innovative solutions help improve the way utilities collect and manage data and deliver service to their customers. For more information visit www.Emerson.com/datamanagement
