MVS205 Multi-Variable Sensor

The MVS205 Multi-Variable Sensor (MVS205R) provides static pressure, differential pressure, and process temperature inputs to a ROC800-Series, FloBoss™ 107, ROC300-Series, FloBoss 407, or FloBoss 500-Series Flow Manager. The inputs from an MVS205 transmitter are used for differential pressure type calculations. The MVS205 typically operates as a remote device that communicates via a serial format.

Variables
Functionally, the MVS205 is a digital transmitter that measures three flow-related variables simultaneously: differential pressure, static pressure, and temperature. These variables are continuously available to the FloBoss or ROC unit that polls the MVS205.

An external three or four-wire Resistance Temperature Detector (RTD) senses the process temperature. The RTD sensor connects directly to the interface circuit board of the MVS205 transmitter. Connection requires user-supplied RTD field wiring.

Transducer and Interface Circuit
The MVS205 contains a transducer and an interface circuit. The transducer, contained in the sensor body, uses capacitance-cell technology to sense differential pressure and piezoresistive technology to sense the static (absolute or gauge) pressure.

The transducer electronics convert the pressure variables directly into a digital format, allowing accurate correction and compensation. A microprocessor linearizes and corrects the raw pressure signals (from the sensor) using characterization data stored in non-volatile memory.

The interface circuit, contained in the electronics head, converts the raw temperature from an RTD into digital format. The interface circuit also allows the MVS205 to communicate the digital pressure signals to a ROC or FloBoss using a serial EIA-485 (RS-485) connection. An explosion-proof electronics head encloses the interface circuit board.

Note: The MVS205 has a 10-pin terminal block that allows case isolation. For more information, refer to MVS205 Case Isolation Installation Sheet (Form A6277).

Accuracy
Two versions of the pressure transducer used in the MVS205 transmitter are available:
- 205P with reference accuracy of 0.075% of the full span.
- 205E with reference accuracy of 0.10% of the full span.

Mounting
Attached to the bottom of the sensor body is a Coplanar™ flange. This flange, which provides drain and vent valves, allows the MVS205 to mount on a pipestand, on a wall or panel, or on an integral orifice assembly or manifold valve.

Note: CE marked assemblies come with cover clamps installed on both ends of the MVS205 to comply with ATEX and IECEx.
MVS205 Multi-Variable Sensor

### Differential Pressure Input

<table>
<thead>
<tr>

**Stability**

±0.125% of URL for five years, with up to ±50°F (28°C) ambient temperature changes and up to 1000 psi (68,9 bar) line pressure

**Ambient Temperature Effect per 50°F (28°C)**

Spans from 1:1 to 30:1 ±(0.025% URL + 0.125% of span)

Spans from 30:1 to 100:1 ±(0.035% URL + 0.175% of span)

**Static Pressure Effects**

Zero error ±0.05% of URL per 1000 psi (68,9 bar)

Span error ±0.20% of DP Reading per 1000 psi (68,9 bar)

**Over-Pressure Limit**

3,626 psi (250 bar) applied on either or both sides without damage to the sensor

**Burst Pressure Limit**

10,065 psi (694 bar)

### Static Pressure Input

**Range**

Either Absolute or Gauge:

- 0 to 5516 kPa (0 to 800 psia/psig)
- 0 to 25,000 kPa (0 to 3626 psia/psig)

**Reference Accuracy**

<table>

±0.125% of URL for five years, with up to ±50°F (28°C) ambient temperature changes

**Ambient Temperature Effect per 50°F (28°C)**

Spans from 1:1 to 30:1 ±(0.05% URL + 0.125% of span)

Spans from 30:1 to 100:1 ±(0.06% URL + 0.175% of span)

**Over-Pressure Limit**

Same as URL

### Process Temperature Input

**Type**

For 3- or 4-wire platinum 100-ohm RTD (conforming to IEC 751 Class B), with \( \alpha = 0.00385 \)

**Range**

-40 to 400°C (–40 to 752°F)

---

1. Consult factory for special ranges and materials which may be available. For example, 0 to 6.22 kPa (0 to 25" H2O) at ±0.10% reference accuracy.
**Technical Specifications**

</tr>
</tbody>
</table>

**Note:** Process temperatures above 85°C (185°F) require you to lower the product’s maximum ambient temperature rating by a 1.5:1 ratio. To determine the adjusted maximum temperature rating, perform the following calculation:

\[
\text{Adjusted max Tamb} = \text{Product Max Tamb} - \left(\left[(\text{Actual Process Tamb} - 85°C (185°F)) \times 1.5\right]\right)
\]

Example: Adjusted Max Tamb = 75°C – [(95°C – 85°C) * 1.5] = 60°C.
## Approvals

### Product Markings for Hazardous Locations
- **CSA C/US:** Class I, Division 1, Groups C and D.
- Class I, Division 2, Groups A, B, C, and D, T5 (Tamb=70°C [158°F]), T4 (Tamb=75°C [167°F]), Type 4X.
- **CE Marked:** Ex d IIB T5 (Tamb=75°C)
- Ex tD A21 IP66 T85°C
