Rosemount 848T Wireless Temperature Transmitter
NOTICE

This installation guide provides basic guidelines for the Rosemount 848T. It does not provide instructions for detailed configuration, diagnostics, maintenance, service, troubleshooting, or installations. Refer to the Rosemount 848T reference manual (Document Number 00809-0100-4848) for more instruction. The manual and this QIG are also available electronically on www.rosemount.com.

WARNING

Explosions could result in death or serious injury:

Installation of this transmitter in an explosive environment must be in accordance with the appropriate local, national, and international standards, codes, and practices. Please review the Product Certifications section for any restrictions associated with a safe installation.

Before connecting a Field Communicator in an explosive atmosphere, ensure the instruments are installed in accordance with intrinsically safe or non-incendive field wiring practices.

Electrical shock can result in death or serious injury.

Avoid contact with the leads and terminals. High voltage that may be present on leads can cause electrical shock. This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions. This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

The power module may be replaced in a hazardous area. The power module has surface resistivity greater than one gigaohm and must be properly installed in the wireless device enclosure. Care must be taken during transportation to and from the point of installation to prevent electrostatic charge build-up.

NOTICE

Shipping considerations for wireless products:

The unit was shipped to you without the power module installed. Please remove the power module prior to shipping the unit.

Each power module contains two “C” size primary lithium batteries. Primary lithium batteries are regulated in transportation by the U.S. Department of Transportation, and are also covered by IATA (International Air Transport Association), ICAO (International Civil Aviation Organization), and ARD (European Ground Transportation of Dangerous Goods). It is the responsibility of the shipper to ensure compliance with these or any other local requirements. Please consult current regulations and requirements before shipping.

Wireless considerations

Power up sequence

The Power Module should not be installed on any wireless device until the Smart Wireless Gateway ("Gateway") is installed and functioning properly. Wireless devices should also be powered up in order of proximity from the Gateway, beginning with the closest. This will result in a simpler and faster network installation. Enable Active Advertising on the Gateway to ensure that new devices join the network faster. For more information see the Smart Wireless Gateway Manual (Doc. No. 00809-0200-4420).

Antenna position

The antenna should be positioned vertically and it should be approximately 3 ft. (1 m) from any large structure, building, or conductive surface to allow for clear communication to other devices.

Figure 1. Antenna Position

Conduit plug

The temporary orange plugs should be replaced with the included conduit plugs using approved thread sealant.
Field communicator connections

The Power Module needs to be connected for the Field Communicator to interface with the Rosemount 848T Wireless.
Step 1: Physical installation

Initial configuration

If the device was ordered with a factory configured Network ID and Join Key, it should join the network with no user input. If unsure, the Network ID and the Join Key may be manually entered to match the Gateway’s.

The Network ID and Join Key may be obtained from the Gateway on the Setup > Network > Settings page on the web server (see Figure below).

The Network ID and Join Key may be changed in the wireless device by using the following Fast Key sequence.

<table>
<thead>
<tr>
<th>Function</th>
<th>Key Sequence</th>
<th>Menu Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wireless</td>
<td>2,1,1</td>
<td>Join Device to Network</td>
</tr>
</tbody>
</table>

Sensor configuration

Sensor inputs can be configured for different sensor types. To verify or change the sensor configuration with a Field Communicator, use the following Fast Key sequence.

<table>
<thead>
<tr>
<th>Function</th>
<th>Key Sequence</th>
<th>Menu Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensor Configuration</td>
<td>2,1,3</td>
<td>Configure Sensors</td>
</tr>
</tbody>
</table>

Remote mount

The Rosemount 848T Wireless is designed to be installed only in the Remote Mount configuration where the sensor is mounted separate from the 848T housing, then connected to the 848T via conduit.

1. Install the sensor according to standard installation practices. Be sure to use thread sealant on all connections.
Step 1 continued...

2. To reduce sensor wiring length, mount the Rosemount 848T Wireless transmitter central to all of the measurements. When installing the 848T wireless, the conduit entries need to be facing downward. If using the mounting bracket (Option Code B6), mount to a 2-in. pipe.

3. Run wiring (and conduit, if necessary) from the sensor to the 848T. For an easier installation, use the outside conduit entries as shown below. Any unused conduit entries should be sealed with approved sealant using the included threaded conduit plugs.

4. Pull the wiring through the threaded conduit entry of the 848T.

5. Attach the sensor wiring to the terminals as indicated on the wiring diagram. Note that Terminal screw 5 is for attaching the shield wire of the sensor to the device. See 848T Wireless Reference Manual (Document No. 00809-0100-4848) for more information.
Step 1 continued...

6. To connect the power module, remove the plastic plug from the receptacle.

7. After initial installation, close the housing cover securely. Always ensure a proper seal by installing the electronics housing cover so that metal touches metal, but do not over tighten.

8. Position the antenna vertically. The antenna should be approximately three feet (1 m) from any large structures or buildings to allow clear communication to other devices.

Installing the optional voltage adapter

The Rosemount 848T Wireless voltage adapter allows voltage measurement from 0-10 volts. Each adapter accommodates 2 voltage inputs, and can be installed interchangeably on inputs 1 & 2 or 3 & 4.
Step 1 continued...

To install voltage adapter:
1. Open terminal screws 2 and 3 on BOTH inputs. Note that the screws are captive and should NOT be completely removed by using excess force.

2. Angle adapter and slide spade lugs into terminals 2 and 3 on the left side, as shown in the figure below. Ensure that the positive and negative polarity indicators match on the adapter and the terminal block.

3. Lower right side of adapter into terminals 2 and 3 on the right side and center the adapter.

4. Tighten all terminal screws to lock divider in place.
Step 2: Verify operation

Operation can be verified using one of three methods: Field Communicator, the Smart Wireless Gateway’s integrated web interface, or via AMS™ Wireless Configurator.

Field communicator

For HART communication, an 848T Wireless DD is required. For connecting with a Field Communicator, refer to Figure 3 on page 4.

<table>
<thead>
<tr>
<th>Function</th>
<th>Key Sequence</th>
<th>Menu Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communications</td>
<td>3,3</td>
<td>Join Status, Communications Status, Join Mode, Number of Advertisements Heard, Number of Available Neighbors, Number of Join Attempts</td>
</tr>
</tbody>
</table>

Smart Wireless Gateway

In the Gateway’s integrated web interface, navigate to the Explorer page. This page shows whether the device has joined the network and if it is communicating properly.

Note
It may take several minutes for the device to join the network.

Note
If the device joins the network and immediately has an alarm present, it is likely due to sensor configuration. Check the sensor wiring (see “Rosemount 848T Terminal Diagram” on page 10) and the sensor configuration (see “848T Fast Key Sequence for Field Communicator” on page 11).
Step 2 continued...

**AMS® Wireless Configurator**

When the device has joined the network, it will appear in the Device Manager as illustrated below.

**Figure 5. AMS Wireless Configurator Explorer Page**

### Wiring 0-10 Volts inputs on the voltage adapter

Wiring voltage 0-10 volt inputs using the adapter follows the same procedure as mV inputs and thermocouples.
Quick Start Guide

Step 2 continued...

Figure below shows how to connect the voltage leads.

![Diagram showing how to connect voltage leads](image)

**Adapter requirements**

1. The adapter is only designed to be used with the 1000 mV sensor type, found on device revisions 3 and above. If it is ordered pre-installed from the factory, this will be the default sensor type. If the adapter is ordered as a spare part, the user must configure the inputs to this sensor type. The user is responsible for converting the 0-1000 mV transmitter output into a 0-10 volt scale. The formula to do this is as follows:

\[
\frac{\text{Transmitter output (in mV)}}{100} = \text{Actual reading (in V)}
\]

2. If input type S004 ((1) dual channel voltage adapter) is ordered, it will be factory installed on channels 1 and 2. However, if the adapter is required to be installed on channels 3 and 4, the procedure to do so is a simple process. Confirm that channels 3 and 4 are configured for 1000 mV sensor input. After confirmation, remove the adapter from channels 1 and 2 and follow the steps provided in the ‘Installing the Optional Voltage Adapter’ section of this guide to install it on channels 3 and 4.

3. In order to ensure the device remains within the accuracy specifications, the effect of source impedance must be checked. Loaded to unloaded, the impedance ratio cannot exceed 0.1%. For detailed instructions on how to verify this, refer to Section 5 of the User’s Manual.
Product certifications

Approved manufacturing locations

Rosemount Inc. – Chanhassen, Minnesota, USA
Emerson Process Management GmbH & Co. - Germany
Emerson Process Management Asia Pacific Private Limited - Singapore

Telecommunication compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation.

This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification for FM

As standard, the transmitter has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM, a nationally recognized testing laboratory (NRTL), as accredited by the Federal Occupational Safety and Health Administration (OSHA).

EC Declaration of Conformity
No: RMD 1073 Rev. B

We,
Rosemount Inc.
3300 Market Boulevard
Chanhassen, MN 55317-9685
USA

declare under our sole responsibility that the product,

Rosemount 848TX Wireless Temperature Transmitter

manufactured by,
Rosemount Inc.
12001 Technology Drive
Eden Prairie, MN 55344-3695
USA
and
8200 Market Boulevard
Chanhassen, MN 55317-9685
USA

to which this declaration relates, is in conformity with the provisions of the European Community Directives, including the latest amendments, as shown in the attached schedule.

Assumption of conformity is based on the application of the harmonized standards and, when applicable or required, a European Community notified body certification, as shown in the attached schedule.
